

Established in 2023, the TEEEX Certified Environmental Safety and Health Official (CESHO) Program is the next step in educating safety professionals. The program is designed to provide safety professionals who are lacking environmental experience and knowledge with a solid foundation to move forward and help safety professionals navigate environmental compliance. While anyone is welcome to attend our five new environmental classes, the CESHO Program is designed to link the TEEEX CESHO Program with an environmental component. Anyone with a CSO is eligible to receive the CESHO upon successful completion of our five environmental classes.

ENV410 Introduction to Environmental Compliance

Introduction to Environmental Compliance is designed to provide an overview of environmental laws and regulations and give participants a basic understanding of particular environmental regulatory programs. The scope of this course is the environmental regulatory programs at the federal level. The course focuses primarily on wastes and waste minimization, water discharges, air emissions, pollution prevention, and general environmental compliance issues.

ENV420 Hazardous Waste Management and Compliance

Hazardous Waste Management and Compliance is designed to provide an overview of the Resource Conservation and Recovery Act and related regulations as they relate to environmental compliance and waste management.

ENV430 Managing Environmental Release Events

Managing Environmental Release Events is designed to provide an overview of the laws and regulations that guide the management of accidental environmental release events.

ENV440 Environmental Management of Water

Environmental Management of Water will cover the fundamentals of various water programs that may apply to any given industrial facility. The regulatory framework will include the Clean Water Act which will provide CHSO's with information about pollution prevention, storm water best management practices, how to meet the industrial wastewater treatment system standards, and the concepts involved with downstream criteria.

ENV450 Environmental Monitoring and Instrumentation

Environmental Monitoring and Instrumentation is designed to provide a comprehensive overview of environmental monitoring methods and instrumentation. Topics will cover equipment selection, use, data collection, and analysis. Hands-on use of monitoring equipment will also be provided.
