

Preparedness Program

Emergency: Managed

Preparing today, for tomorrow's Challenges

TOMORROW'S CHALLENGES TODAY...

They're all out there...waiting.

- A natural disaster
- A public health nightmare
- A terrorist attack

And maybe other calamities are coming. But whatever the future holds, one thing is certain—eventually your incident management team will be challenged. Will your team be ready? Will the plans and procedures work? Do you have the resources to get the job done? And how do you know?

The TEEEX Preparedness Program can help you answer these questions and more. We provide technical assistance, training and exercises for professionals working in both public and private sector organizations. Our customizable solutions are designed to make a good plan better. It can make a sound team stronger. It can demonstrate a need for added resources. But most of all, it can make your community safer and better prepared for any contingency. It can do all this because it brings you face-to-face with tomorrow's challenges today — challenges your emergency management team must overcome to respond successfully in a crisis.

As a force multiplier, the TEEEX Preparedness Program has capabilities to help with all states of the Preparedness Cycle: assessment, planning, preparation, and evaluation.

Preparedness Cycle

- **Assessment**— Identifying existing, potential, and perceived threats and vulnerabilities to assess risk.
- **Planning**— Determining specific capabilities or shortfalls and the activities to best address the risk.
- **Preparation**— Implementing and training best practices and plans to deliver and build capabilities.
- **Evaluation**— Validating capabilities and identifying gaps with exercises and simulations.

preparedness@teex.tamu.edu

“In my opinion this is the best class of its kind in the country with all the participants coming home with a new tangible skill set in relation the inter-discipline management of a large scale, widespread disaster. TEEX’s professional program provides the participants with the most realistic experience possible, which in turn fosters the necessary ‘urgent’ environment that is so critical in executive emergency management and decision-making”

— Joseph Castro, Deputy Chief,
Los Angeles Fire Department

Planning / Technical Assistance

TEEX has been providing technical assistance for public and private institutions since its inception in 1948. Through our technical assistance services, the Preparedness program assists organizations in building resiliency and maintaining continuity in the face of catastrophic disasters. These in-depth services include the creation and revision of existing policies, plans, procedures, and processes.

These sessions are available in a variety of formats, including one-on-one sessions, seminars, and train-the-trainer classes and are designed to meet your specific needs and requirements.

- Risk and Hazard Assessments/Analysis
- Contingency Planning and Policy Development
- Emergency Management and Response
- After Action Reviews and Reporting

Training

Training begins with preparedness and coordination planning and progresses through incident response and on to recovery. The Preparedness program offers all types of training and incident response capabilities that address the intermediate and advanced levels of training needed within any organization, industry, or jurisdiction, including industrial settings, universities, hospitals, private and public agencies.

Our customizable courses are designed to keep participants engaged and facilitate implementation of the all-hazards, multi-disciplinary, team-based approach outlined in the National Response Framework. Using simulation / virtual reality and classroom-based instruction, courses focus on awareness, management and planning to provide participants the tools to prepare for, and deal effectively, with a wide variety of emergency situations.

Courses can be delivered at any location worldwide or at the TEEX Emergency Operations Training Center in College Station, Texas.

Example course topics can include:

- ICS 100, 200, 300, 400
- Position Specific
- Incident Management Team
- Incident Management for On-Scene Commanders
- Crisis Management Team
- EOC Operations
- Observer/ Controller
- Executive Level / Senior Officials
- Custom Training / Workshops

Exercises

Utilizing the Homeland Security Exercise and Evaluation Program (HSEEP) as a guide, TEEX Subject Matter Experts (SMEs) and Master Exercise Practitioners (MEPs) work with clients to develop exercises or an exercise program addressing priorities established by the organization’s leadership. National Preparedness for Response & Exercise Program (NPREP) compliance for our industrial clients can be incorporated if desired.

TEEX is capable of exercising a wide range of scenarios and hazards, including multi-hazard exercises. Examples of hazards or scenarios TEEX SMEs have developed and delivered include:

- Custom Exercises and Scenarios
- Security
- Terrorism / WMD
- Active Shooter / Hostage Situation
- Petro / Chemical Industry
- Oil Spill Response
- Maritime / Vessel Response
- Hurricane / Severe Weather / Natural Disasters
- Pandemic / Public Health
- Chemical, Biological, Radiological, Nuclear, Explosives (CBRNE)
- Hazardous Materials Response
- Cyber-Intrusion / Cyber Security
- Mass Casualty / Catastrophic Incident
- Mass Transit / Airports / Hospitals
