

WIDE AREA SEARCH

PER-213

DHS/FEMA-funded course

WIDE AREA SEARCH

PER-213

When disaster strikes it can be a challenge to effectively mobilize, organize, and deploy needed resources. The TEEX /NERRTC Wide Area Search course is an excellent training opportunity for nearly any jurisdiction or agency that may face such an emergency. The discipline applies to a vast number of critical situations including natural disasters or terrorist incidents. Participants are instructed in practical search methods and skills so they can perform systematic searches over a large affected area. The training includes challenging exercises that mirror real life scenarios. The three-day long event concludes with an in-depth exercise that requires participants to apply the skills gained during the course. The instructors delivering the course are knowledgeable, experienced emergency responders who have actively employed wide area search techniques during some of the nation's largest and most challenging search and rescue operations.
